

# Reading Strategies

Will help you understand what you read and help with studying.

1. **Survey**- Look over the contents of the text to know what information the book contains

- Note chapter titles, pictures, captions, graphs, and diagrams

2. **Question**- When you read each chapter heading turn that statement into a question

- Write questions that begin with either: who, what, when, where, why, how, compare, contrast, describe, explain, list

3. **Read**- Read the section with the intent of finding the answer to your question

4. **Recite**- Recite the answers to your questions out loud.

- Are you able to answer in your own words
- If not, re- read the section again and reformulate your answer

5. **Review**- Review the chapter review questions as well as your own questions and answers for understanding.

- Write down answers to questions
